SPEKTRA

Ready for TESTelligence!

RELEASE NOTE

CV-10 Rev. 1.4

Release Note

CV-10 Firmware _ Version 1.4

1. New features

- Extension of the lower frequency range down to 5 Hz

- Control now available for speed (RMS) and displacement (peak – peak)

- DC measurement (for measurement of DC voltages) enables the adjustment of the center voltage for proximity sensors

- For sensors with external power supply, voltage can now be entered manually in the menu (DIR measurement) and is stored in the protocol (Proximity)

- New signal conditioning from 4 ... 20 mA; may require new measurement of the electronics

- Transfer calibration using an external reference sensor

2. Fixed bugs and issues

- Possibility to delete all elements in the data management

- Improved interface and controller

- Acceleration of the profile mode especially in the higher frequency range

3. Related documents

- Software manual

4. Known issues and limitations

- Controller works slowly at low frequencies

CV-10 users can install the new firmware within a few minutes using the built-in update function. If you have any question, feel free to contact our support team: **support@spektra-dresden.de**
